

THE SIMPLE DIGNIFIED CHOICE

Non-Invasive, Leak-Free Urine Collector

Improves quality of life.

The field of Urine Urine Collection has not had a major breakthrough in decades. Millions of patients worldwide, especially women, suffer from incontinence and its many side effects such as irritation and sores from leakage, not to mention catheter-related infections. Even diapers, which need to be changed often, cause wetness, rashes and odor, resulting in social isolation.

UriCap™ and UriGuide™
will improve the lives
of millions of men and women.

GR Dome Medical has engineered a series of innovative devices with the human anatomy in mind. Our non-invasive, leak-free solution is more practical and cost-effective than traditional urine management methods.

For the price of a couple of diapers, we can dramatically improve the quality of life of millions suffering from incontinence – providing them with more mobility and social freedom.

URINE
COLLECTION
JUST GOT A
WHOLE LOT BETTER

ABOUT GR DOME MEDICAL

**Our mission is to dramatically improve the quality of life
for millions of people worldwide suffering from urinary incontinence.**

GR Dome Medical was established by five experts in medicine, urology and Med-Tech, who were disappointed with the lack of innovation and effective solutions in the urine collection industry.

After three years of R&D, the company has crafted three revolutionary patent-pending products that simplify the urine collection process, save healthcare costs, and improve patients' quality of life. The company is funded by Israeli and Swedish investors.

UriCap-M™

New, Comfortable & Leak-Free Male Urine Collector

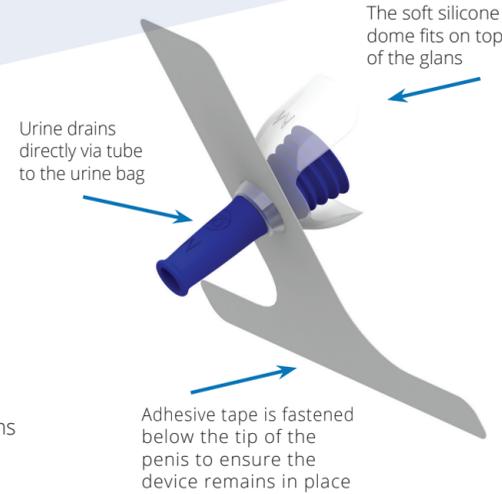

UriCap-M™ (Male) is an innovative and simple solution that helps incontinent men lead a normal life. The device is leak-free and non-invasive – keeping patients dry and thus preventing secondary infections.

A soft silicone dome is placed on the tip of the penis and leads the urine directly to the urine bag via its tube. A holder with adhesive tape ensures that the silicone dome remains in place for up to 24 hours. Since no urine comes in contact with the skin, there is no odor or skin irritation – allowing the patient to lead a more active and social life.

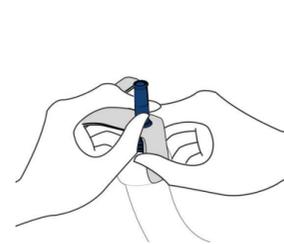

UriCap-M™ has been tested in hospitals, nursing homes and in home-care. The device is patent-pending, FDA and CE-approved.

Benefits:

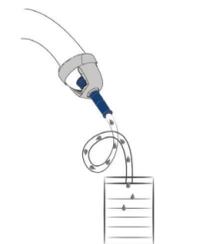

- **Leak-free**
 - Keeps the patient dry
 - Reduces sores and pain
- **Non-invasive**
 - Reduces risk of secondary infections
 - Eliminates discomfort and pain
- **Improves quality of life**
 - Easy to apply and remove by patient or caregiver
 - Reusable and can stay on for up to 24 hours
 - Prevents odor
 - Increases social activity
- **Reduces healthcare costs**
 - Less risk for Catheter Associated Urinary Tract Infections (CAUTI) and associated side effects
 - Fewer CAUTI-related hospital readmissions
 - Less care time
 - Eco-friendly - saves storage space and waste

UriCap-M™ - The first choice for incontinence and urine collection

Place the UriCap-M™ on the tip of the penis and fasten using the adhesive tape

Connect the device to the urine bag via a standard tube

UriCap-F™

Revolutionary Innovation for Female Urinary Incontinence

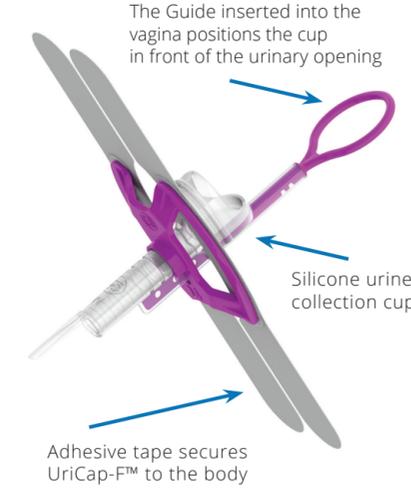

Adapted to the female anatomy, UriCap-F™ (Female) is a unique solution that helps incontinent women lead a normal life. Leak-free and non-invasive, it's the only device that keeps the patients dry, prevents side effects and enables an active social lifestyle.

A thin guide is first inserted into the vagina. When the guide is lifted against the pubic bone, the soft silicone urine cup is automatically positioned directly in front of the urethral opening. An adhesive tape placed on a holder is applied to keep the device in place for up to 24 hours. A standard urine bag (or leg bag) is then applied.

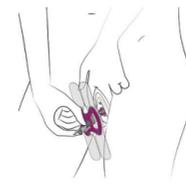

UriCap-F™ has been tested in hospitals and by ambulatory outpatients. It is patent-pending, FDA and CE-approved (Q4, 2015).

Benefits:

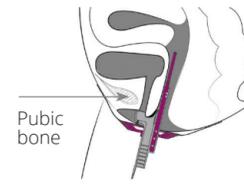

- **Leak-free**
 - Keeps the patient dry
 - Reduces sores and pain
- **Non-invasive**
 - Reduces risk of secondary infections
 - Eliminates discomfort and pain
- **Improves quality of life**
 - Easy to apply and remove by patient or caregiver
 - Reusable and can stay on for up to 24 hours
 - Prevents odor
 - Increases social activity
- **Reduces healthcare costs**
 - Less risk for Catheter Associated Urinary Tract Infections (CAUTI) and associated side effects
 - Fewer CAUTI-related hospital readmissions
 - Decreases care time, prevents medical procedures
 - Eco-friendly - saves storage space and waste

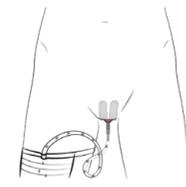

UriCap-F™ - The first choice for managing urine incontinence

The guide is inserted into the vagina

The collection cup positions itself in front of the urinary opening

UriCap-F™ is secured to the body using adhesive tape and the urine bag is connected via the tube of the urine bag

UriGuide™

Simplest Way for Female Self-Catheterization

Based on the same UriCap-F™ principles, UriGuide™ is an innovative device that dramatically simplifies the process of self-catheterization for women.

When the short guide is inserted into the vagina and lifted towards the pubic bone, the catheter is guided directly into the urethral orifice.

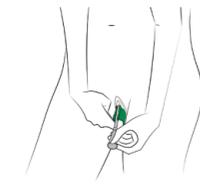

The patent-pending device has been tested with excellent patient feedback. UriGuide™ is FDA and CE-approved.

Benefits:

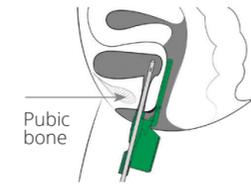

- Facilitates self-catheterization by quickly locating the urinary opening
- Decreases care costs by enabling patients to self-catheterize
- Reduces patient pain and frustration

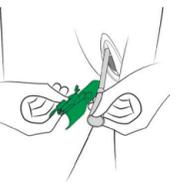

UriGuide™ is inserted into the vagina. The guiding slot positions the catheter directly in front of the urethral opening

Inserting the catheter smoothly through the urethra into the bladder

Drain the bladder

UriGuide™ is removed and the bladder is drained
